

23PrimeFit – App Data Source Flow

23PrimeFit App – Vision & Overview

Introduction

The goal of **23PrimeFit** is to create a **single platform for health, fitness, nutrition, sports performance, and coaching**. Today, users often need multiple apps—one for workouts, another for calorie tracking, another for sleep, another for wearable devices, and another for communicating with their coach. This makes it difficult to track progress and maintain consistency.

23PrimeFit brings all of these features together in one simple and easy-to-use application.

The app is designed for

General fitness users

Weight loss clients

Athletes

Cricket players

People with lifestyle disorders (diabetes, fatty liver, PCOS, obesity)

Personal training clients

Strength & conditioning coaches

The app will combine **workouts, nutrition, wearable technology, health monitoring, and coach support** into one ecosystem.

How the App Works

The app will collect information from three main sources:

1. User Input

The user enters personal information such as age, height, weight, goals, medical history, and daily meals.

2. Wearable Devices

The app connects with devices such as Apple Watch, Garmin, WHOOP, Fitbit, Oura Ring, and Google Health Connect to automatically import health and activity data.

3. Coach Content

Coaches assign workout programs, nutrition plans, educational content, and provide feedback directly through the app.

All of this information is stored in one place to provide a complete picture of the user's health and performance.

Main Features

The first version (MVP) of the app will include:

- User Profile
- Workout Programs
- Exercise Library
- Nutrition Tracking
- Calorie Tracking
- Healthy Recipes
- Wearable Device Integration
- Sleep Monitoring
- Stress Monitoring
- Progress Tracking
- Coach Dashboard
- Client Messaging
- Consultation Booking
- Health Report Storage
- Notifications

Why This App is Different

Most fitness apps solve only one problem.

For example:

MyFitnessPal focuses on nutrition.

WHOOP focuses on recovery and wearable data.

Trainerize focuses on coaching.

Garmin Connect focuses on activity tracking.

23PrimeFit combines these essential features into a single platform while adding specialized coaching programs for health improvement and athletic performance.

Future Vision

After the successful launch of the MVP, the platform will continue to evolve with advanced features such as:

- AI Health Coach
- Biological Age Calculator
- Blood Report Analysis
- Cricket Performance Analytics
- Injury Risk Monitoring
- Recovery Score
- Personalized Health Recommendations
- Smart Meal Planning
- Predictive Health Insights

Development Approach

To reduce development time and cost, the app will use **licensed commercial databases and official APIs** wherever appropriate instead of building every feature from scratch.

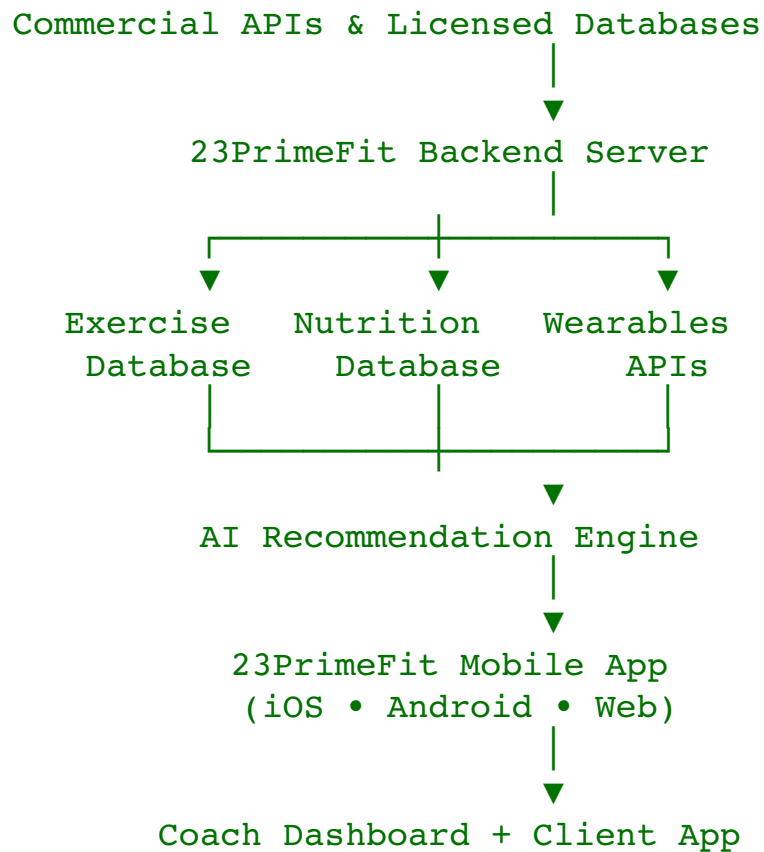

This includes:

- Commercial exercise libraries
- Nutrition and recipe databases
- Wearable device integrations
- Secure cloud storage
- Payment gateways
- Video consultation and messaging services

The development team will focus on building the unique value of **23PrimeFit**, including coaching programs, cricket performance, metabolic health, AI-powered guidance, and an integrated user experience.

Vision Statement

23PrimeFit aims to become a complete Health & Performance Ecosystem—bringing fitness, nutrition, wearable technology, coaching, recovery, and health monitoring together in one intelligent platform to help users improve their health, achieve their goals, and sustain long-term performance.

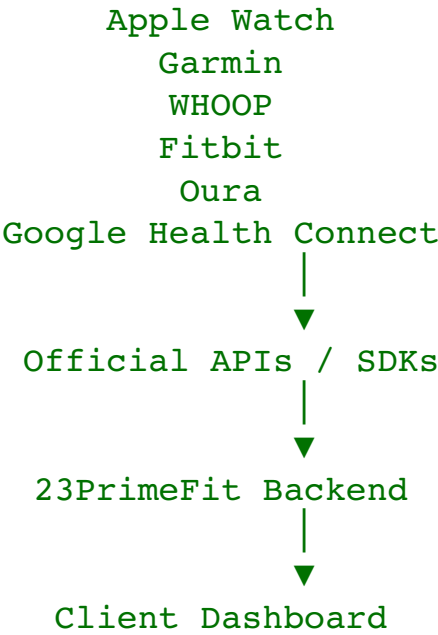

Data Source Table

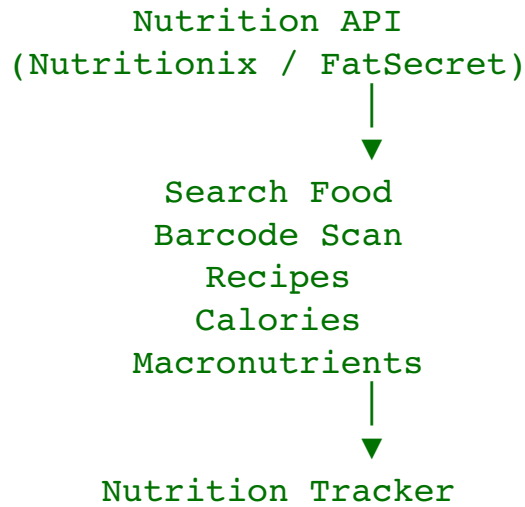

Feature	Data Source	Example Providers
Exercise Videos	Commercial License	Gym Visual, Exercise.com, Physitrack, MoveKit
Exercise Images	Commercial License	Gym Visual, MoveKit
Food Database	API	Nutritionix, FatSecret, USDA
Recipes	API	Spoonacular, Edamam
Barcode Scanner	API	Open Food Facts, Nutritionix
Sleep	Wearable API	Apple Health, WHOOP, Garmin, Oura
Stress	Wearable API	Garmin, WHOOP, Fitbit, Oura
Steps	Wearable API	Apple Health, Google Health Connect
Calories Burned	Wearable API	Garmin, WHOOP, Fitbit
Heart Rate	Wearable API	Apple Health, Garmin
HRV	Wearable API	WHOOP, Oura, Garmin
VO ₂ Max	Wearable API	Apple Health, Garmin
Blood Oxygen	Wearable API	Apple Health, Garmin, Oura
Training Load	Wearable API	Garmin, WHOOP
Blood Reports	User Upload	PDF, JPG, PNG
Progress Photos	User Upload	Camera / Gallery

Workout Programs	23PrimeFit	Created by coaches
Nutrition Plans	23PrimeFit	Created by coaches
AI Coach	OpenAI + 23PrimeFit Knowledge Base	Custom AI
Chat	SDK	Stream, Sendbird, Twilio
Video Consultation	SDK	Agora, Zoom
Payments	Payment Gateway	Razorpay, Stripe

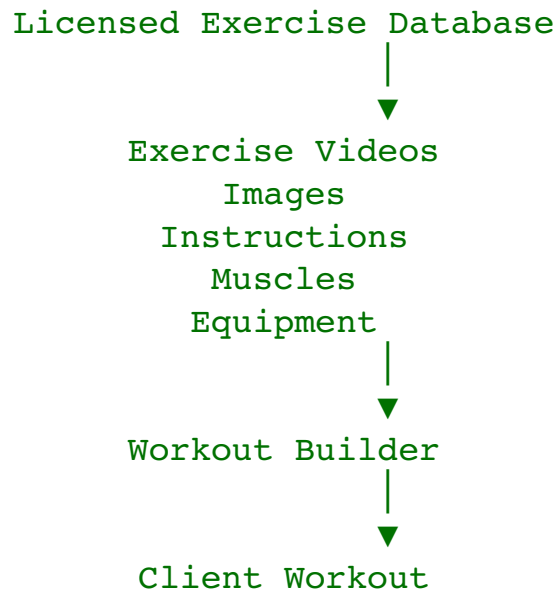

Wearable Integration Flow

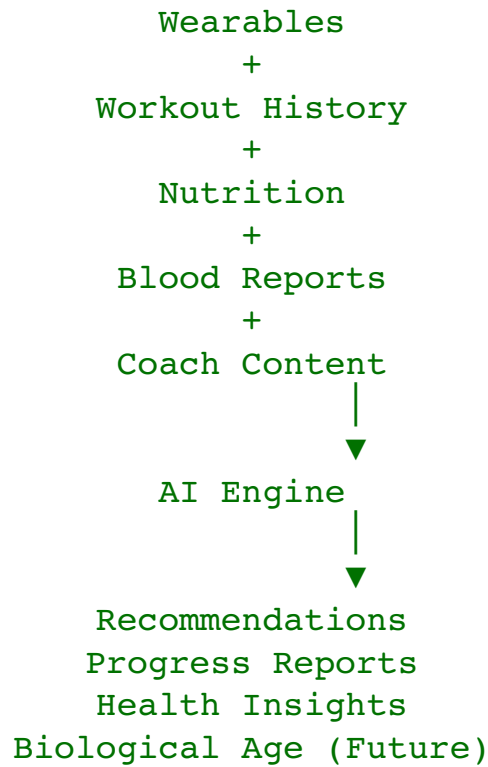

Nutrition Flow

Exercise Flow

AI Flow

MVP Development Priority

Phase	Modules
Phase 1	Login, Client Profile, Dashboard
Phase 2	Workout Builder, Exercise Library
Phase 3	Nutrition & Recipe Tracking
Phase 4	Wearable Integration (Sleep, Stress, Steps, HR, Calories, VO ₂ Max)
Phase 5	Coach Dashboard, Chat, Consultation
Phase 6	AI Coach, Blood Report Analysis, Biological Age
